Control
β-Catenin
β-Catenin + RXRα
ΔNβ-Catenin
ΔNβ-Catenin + RXRα

Fig. 1B

Reduction of Stable β-catenin Transactivation by Stable Expression of RXRα in 293 Cells

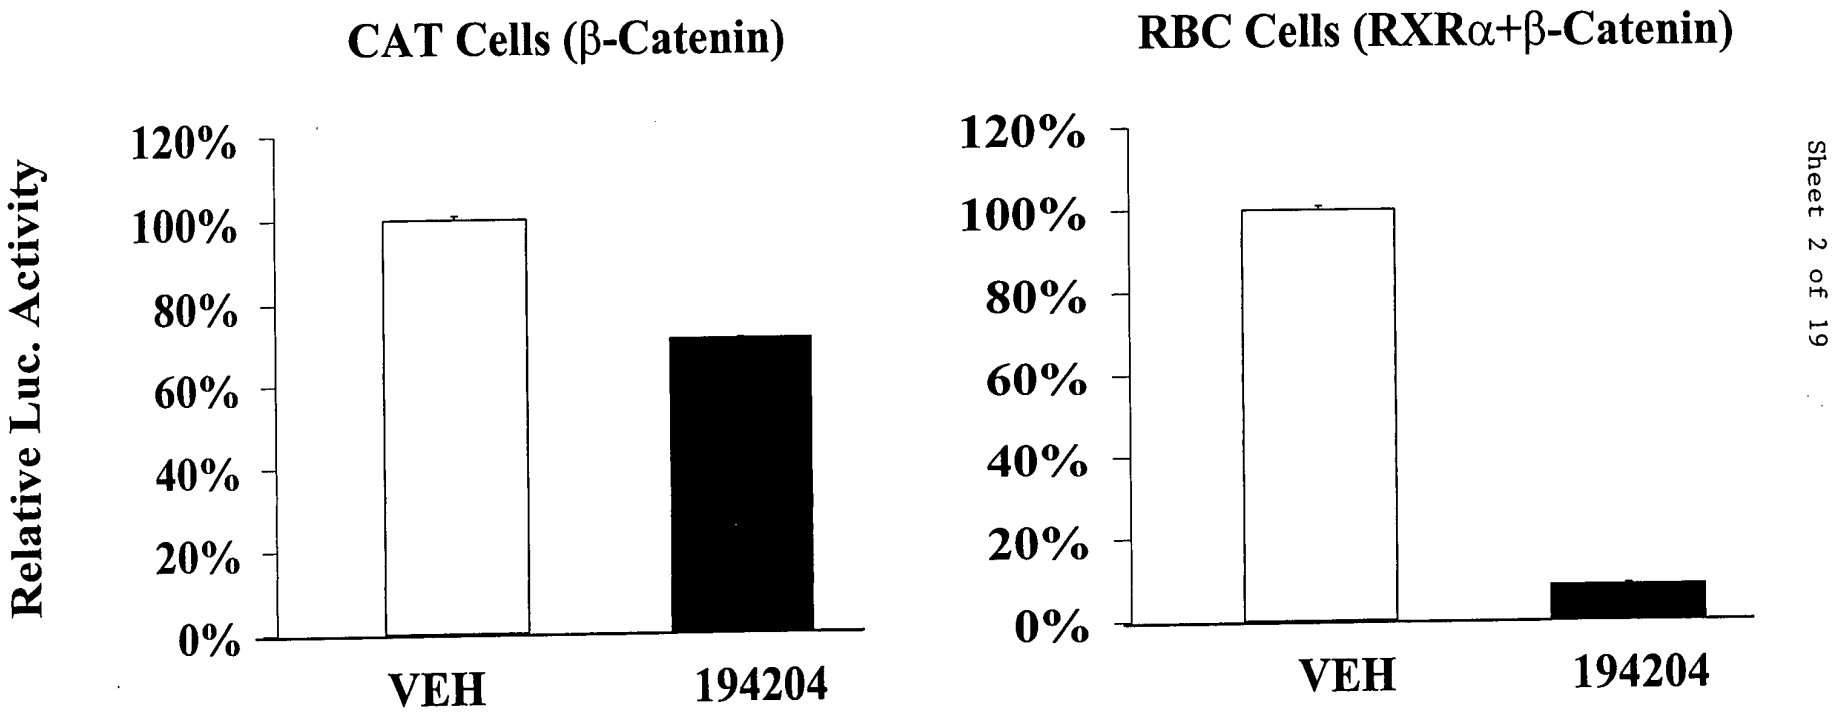

Fig. 1C

Inactivation of Endogenous β-Catenin in Gene Transactivation by AGN194204 *via* RXRα in Colon Cancer Cells

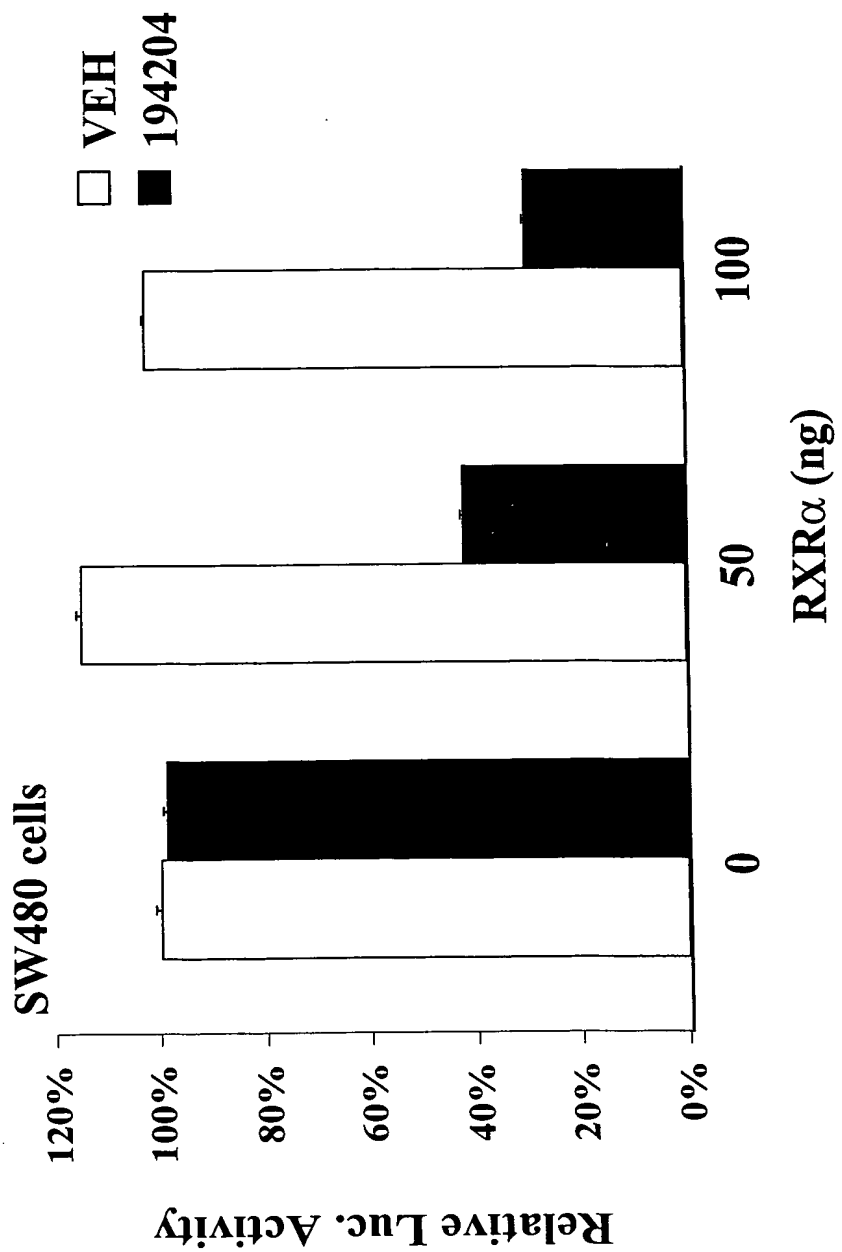

Fig. 2A

Protein-specific Reduction of β-Catenin by AGN194204 *via* RXRα

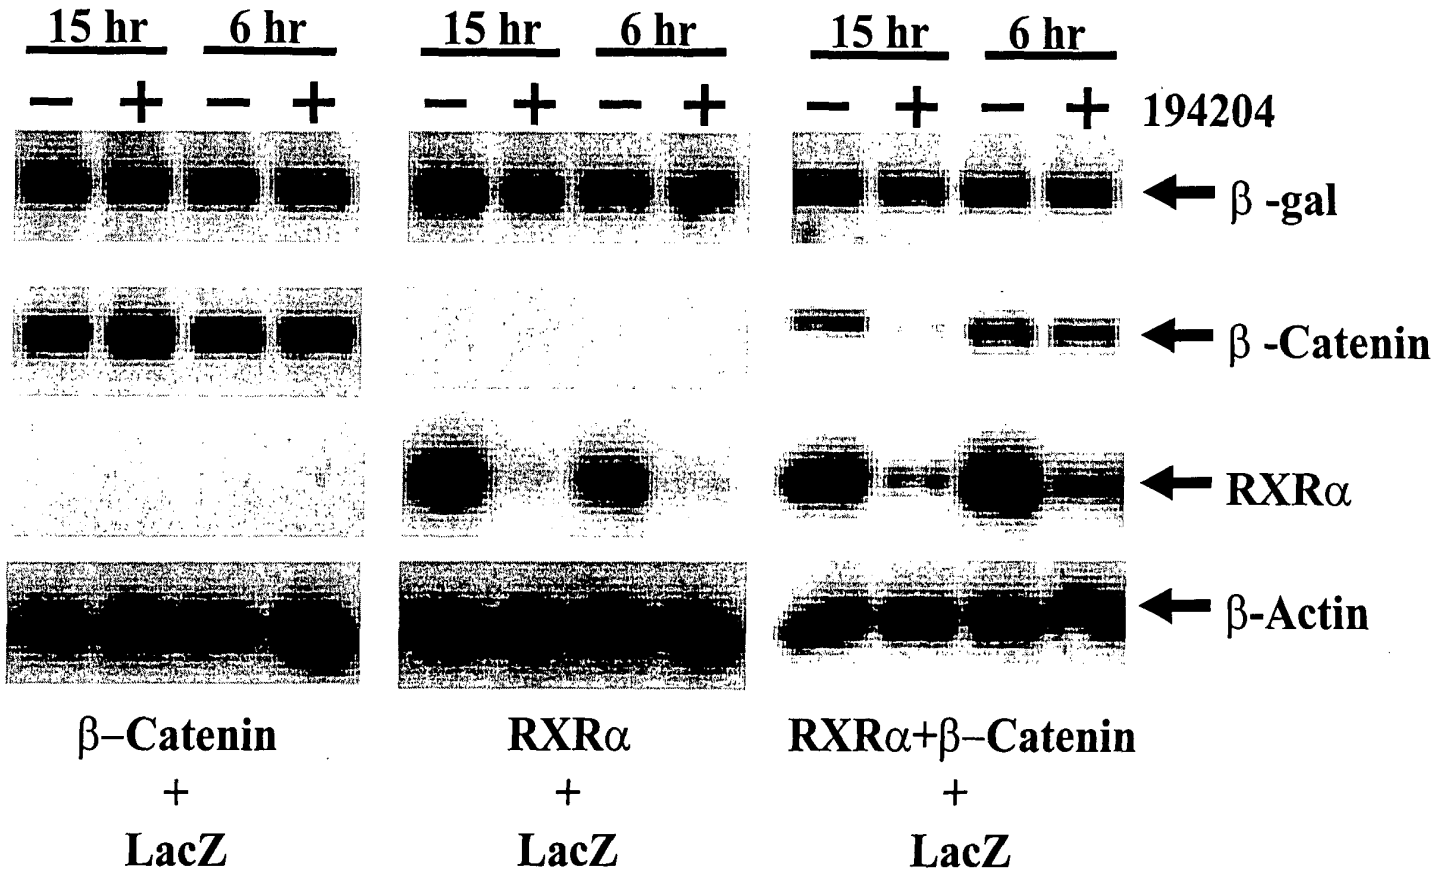

Fig. 2B

Time Course of Degradation of β-Catenin & RXRα by AGN194204 in Stable Cell Line RBC

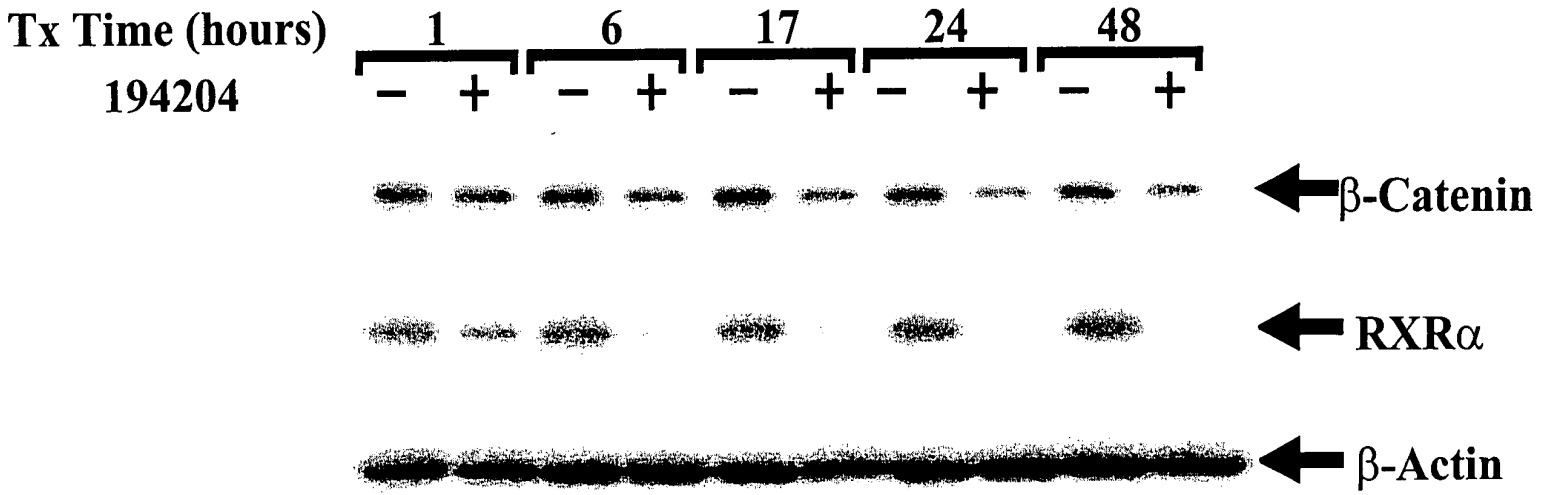

Fig. 2C

RXRα Is Stoichiometrically Required for Reduction of β-Catenin

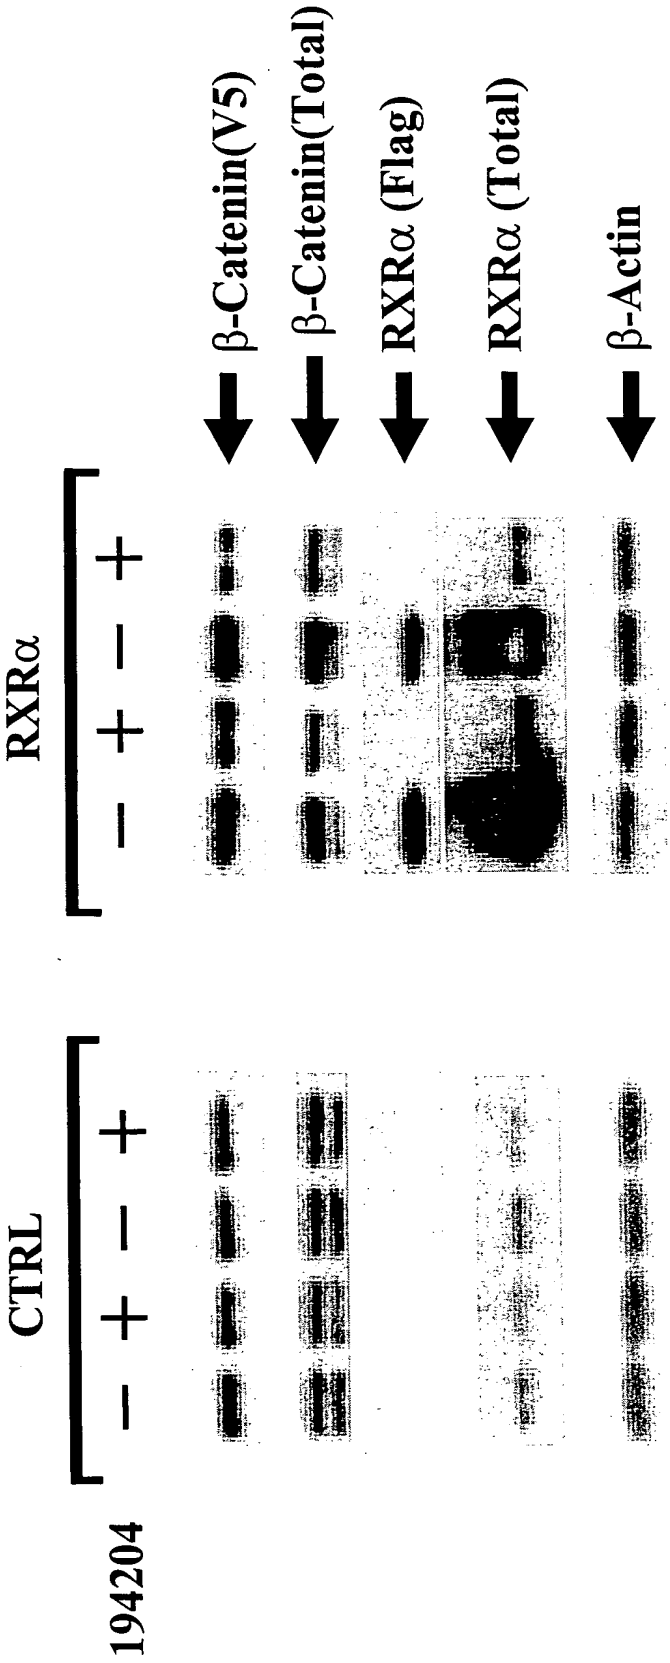

Fig 2D

RXRα-dependent Reduction of β-Catenin by AGN194204 - Stoichiometric Requirement for RXRα

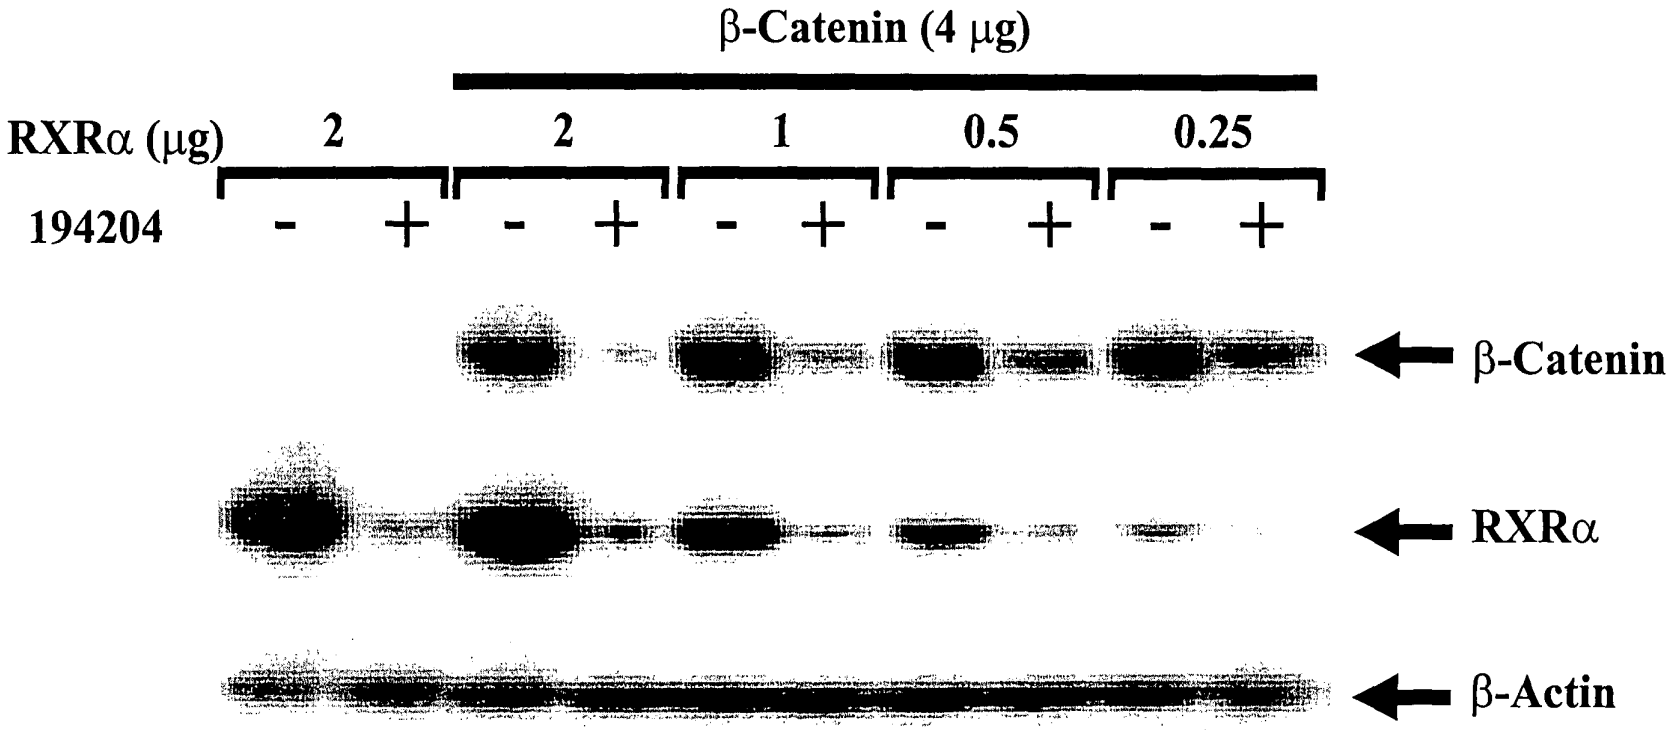

Fig. 2E

AGN194204 Ubiquitously Reduces Wild Type & Mutant β-Catenins

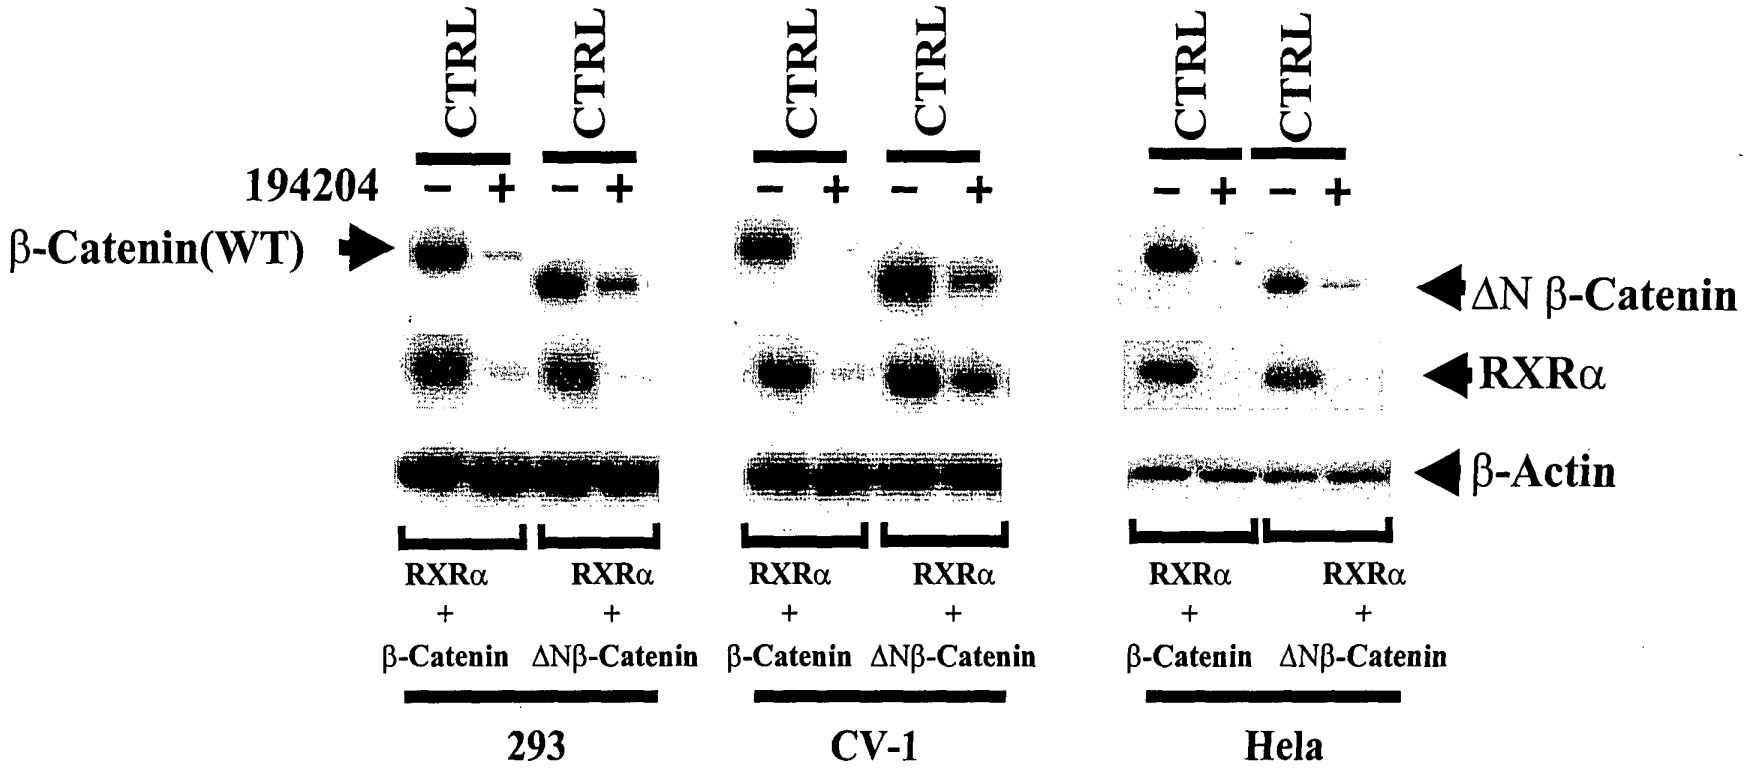

Fig. 2F

AGN194204 Does Not Affect the β-Catenin mRNA Level in Stable Cell Line RBC

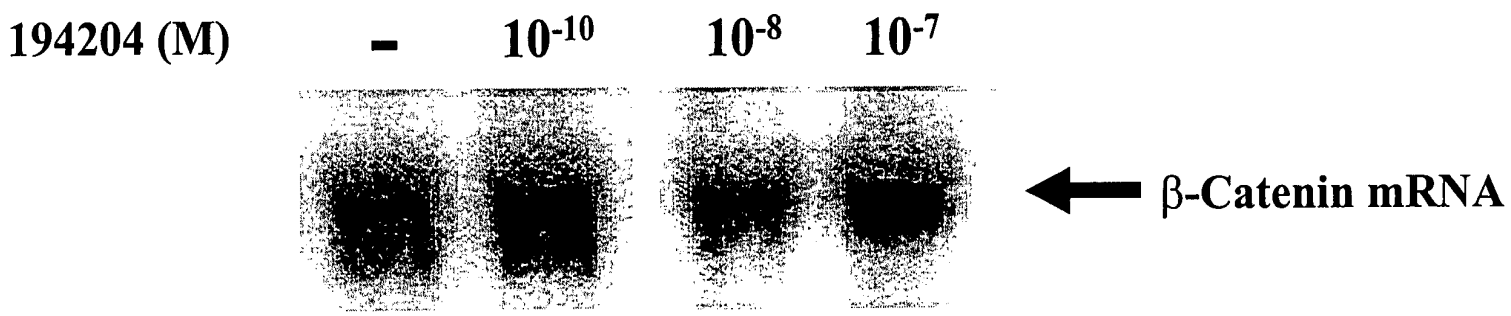

Fig. 3

Time Course of Degradation of ΔNβ-Catenin by AGN194204 in Stable Cell Line RmBC

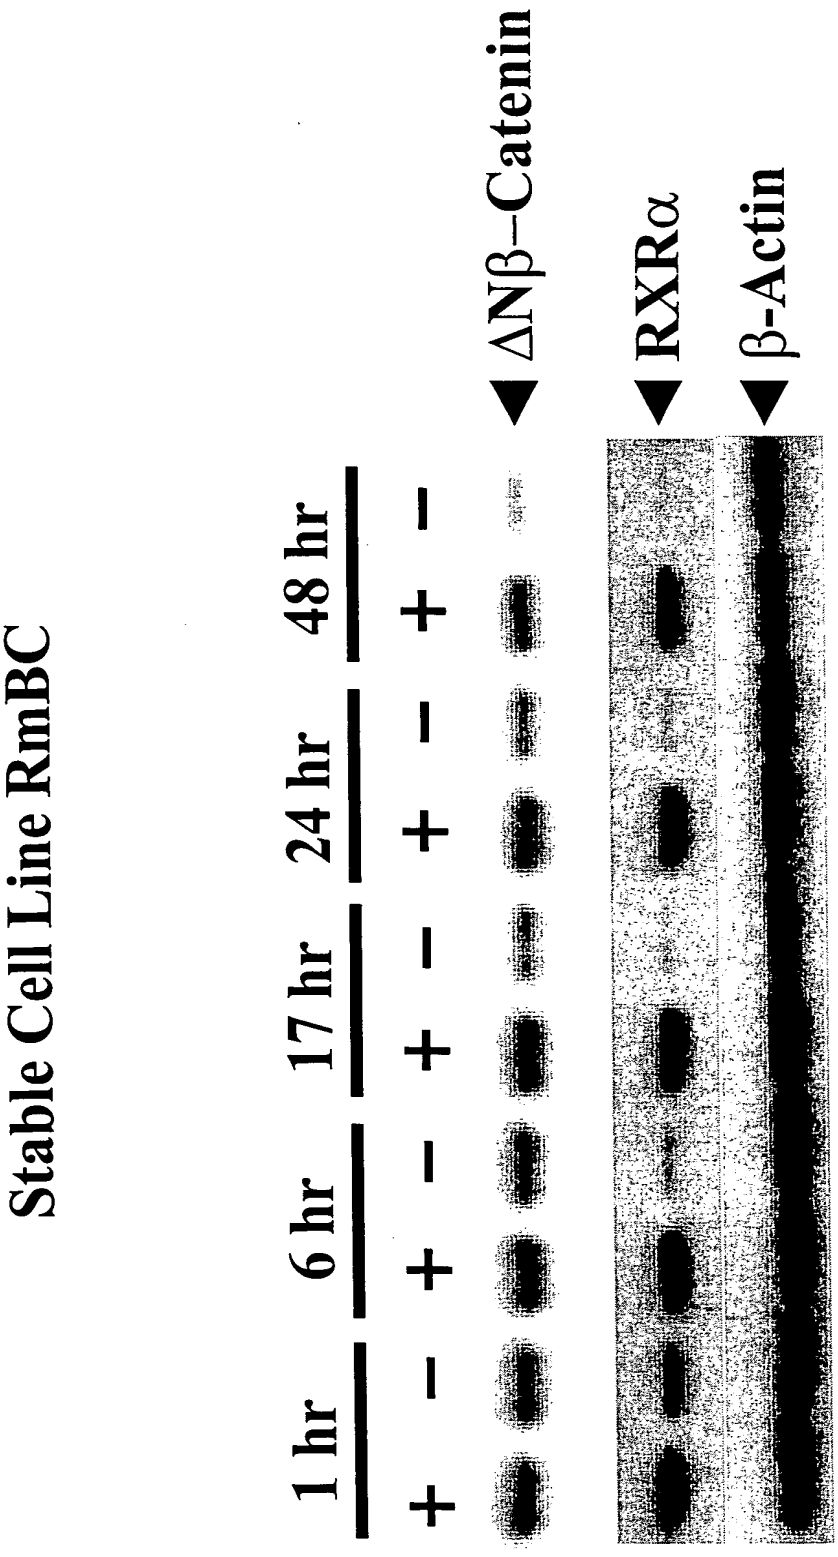

Fig. 4A

High Potency of AGN194204 in Reduction of RXRα and β-Catenin Proteins & Its Antagonism by AGN195393

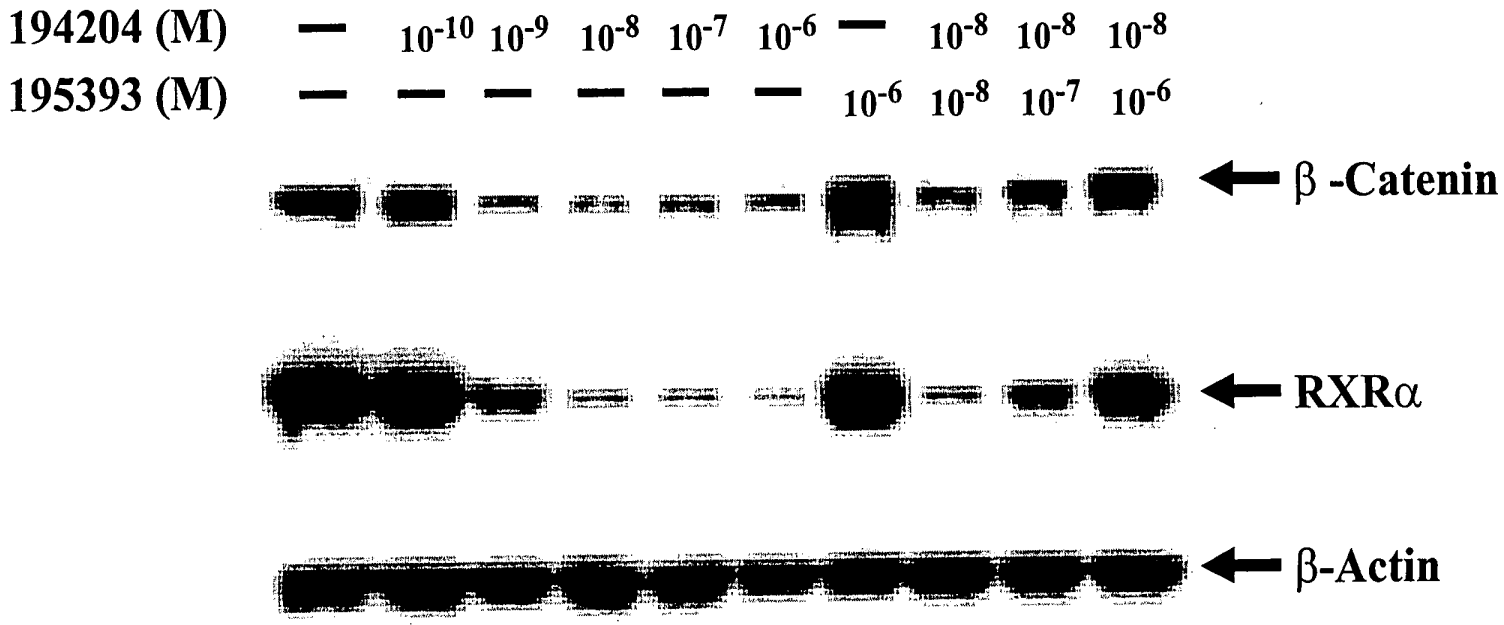

Fig. 4B

Ligand-specificity in Reduction of RXRα and β-Catenin Proteins

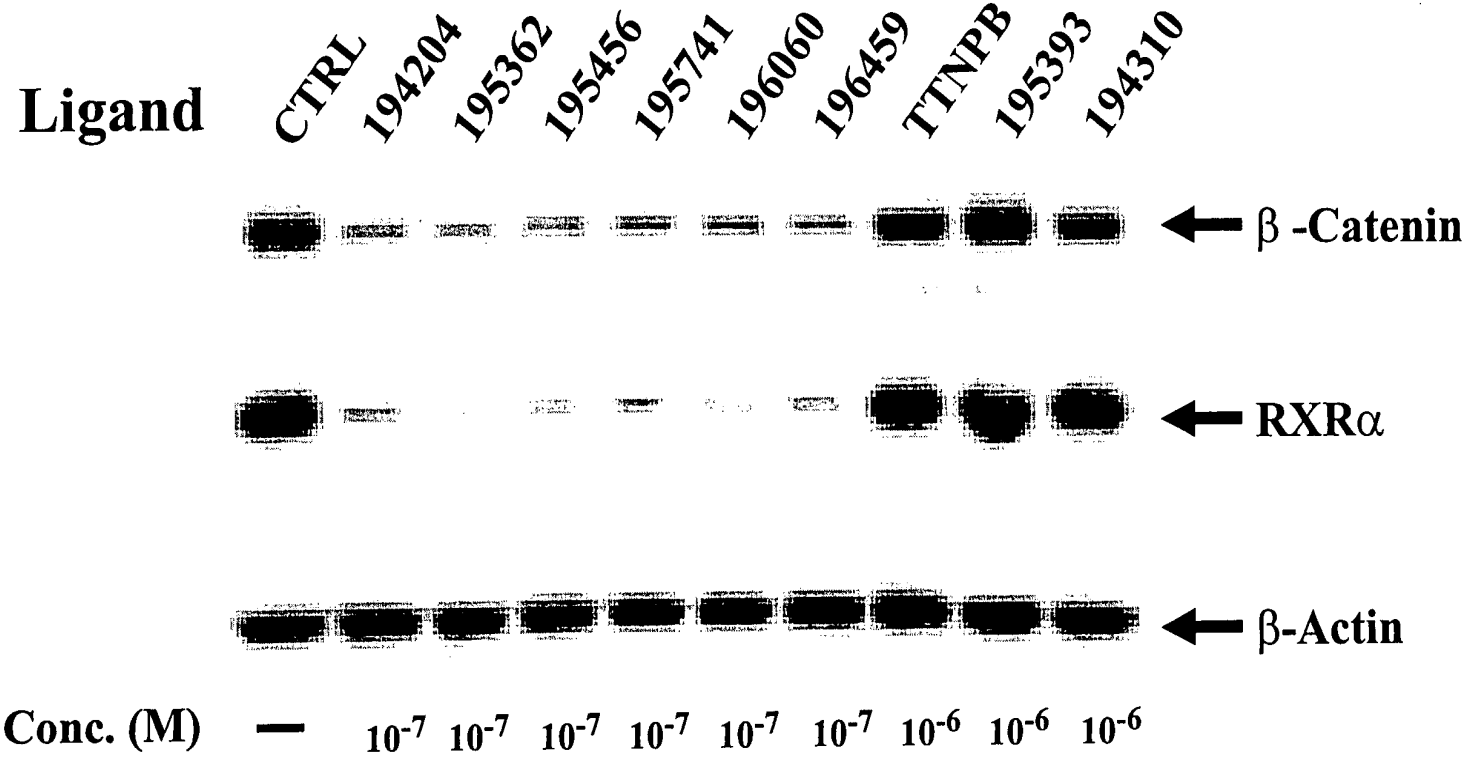

Fig. 4C

AGN194204-induced Reduction of RXRγ & β-Catenin Proteins

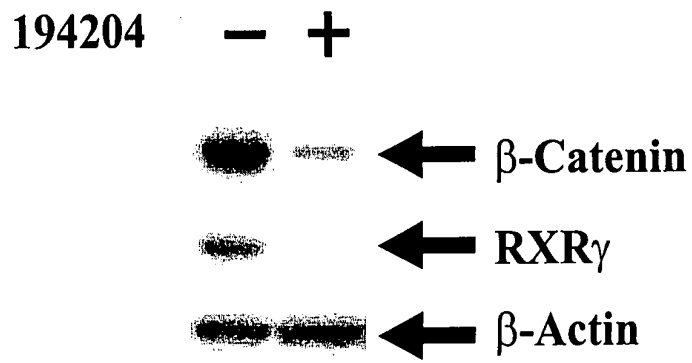

Fig. 4D

RARα but not β and γ Minimally Reduces β-Catenin Protein

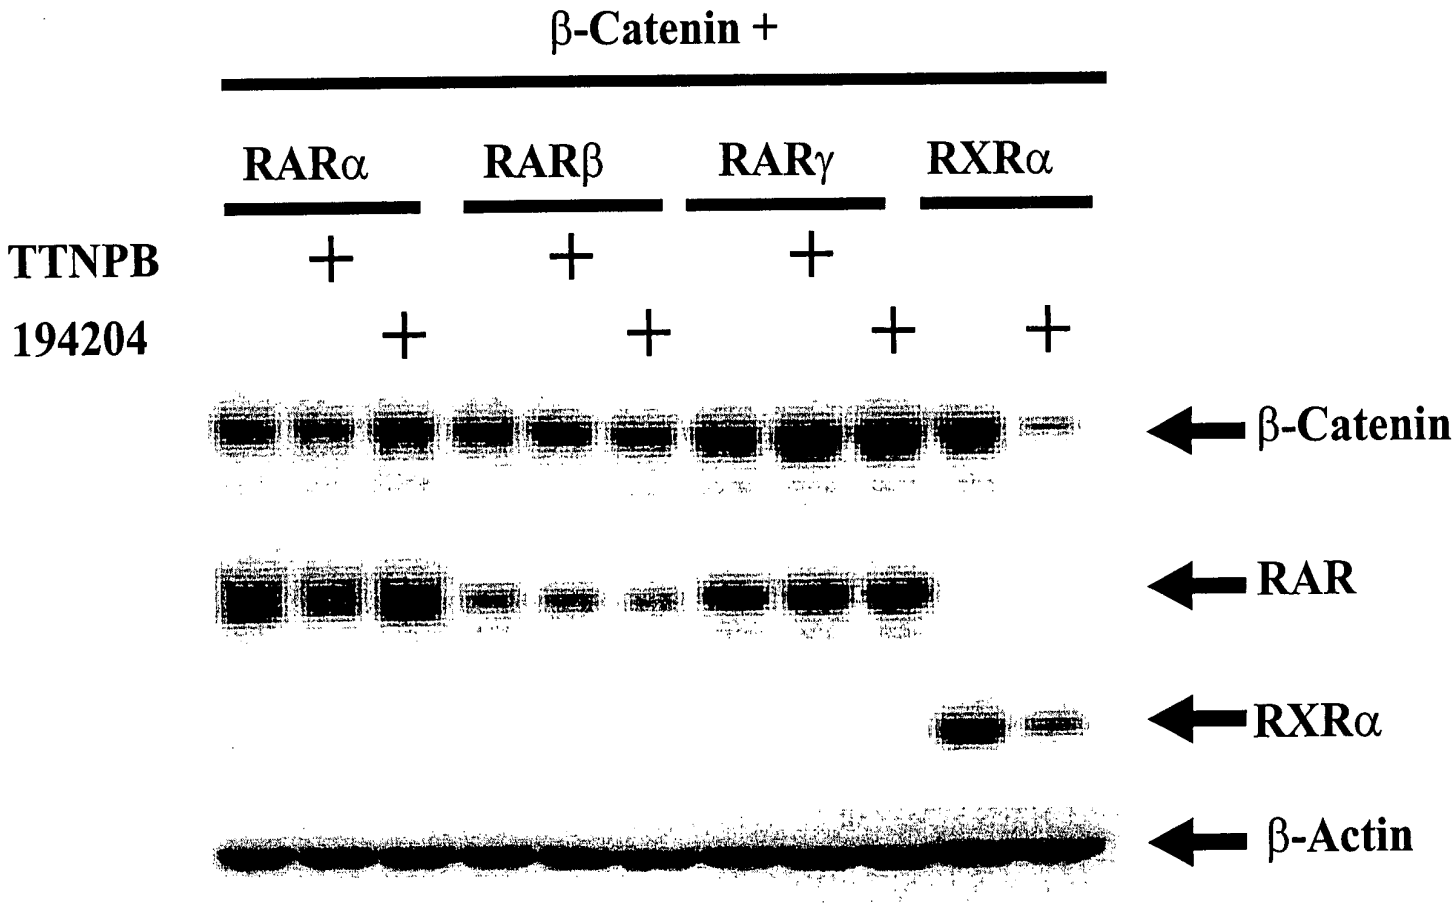

Fig. 4E

RXRα & Its Ligand Reduce Both RAR and β-Catenin Proteins
